To Whom It May Concern:

We recently switched to your 450 MGH radio system with G.P.S. and status keys. We have thoroughly enjoyed the benefits that are included with your system. Besides your excellent radio reception in Southern California, there are various features that we have found to help our dispatch operate more efficiently.

One of these features is the status keys. Utilizing these keys reduces our airtime drastically and allows drivers to be able to communicate with the dispatchers more readily. There is also G.P.S. that shows the dispatchers the location of the trucks at all times. This assists them in sending the closest truck to a call and therefore reduces our response times and increases our level of customer service. It has also helped our company reduce our monthly fuel costs. In addition, there is an emergency key in the truck that the driver can utilize if an urgent situation occurs. We have already used this feature and found it to be helpful in assisting the driver in an expedient manner.

I appreciate your dedication to customer service and look forward to continue working with you in the future.

Sincerely,

Charles Sturrock
General Manager
